

IN THE SPECIFICATION

Please amend the second paragraph of page 8 to read:

The plasma protein composition is administered to the animal by placing it in the animal's feed or water system. If treated to remove the fibrinogen component, the plasma protein composition does not clot or gel in water and does not plug up the water lines. The plasma protein composition should be in the feed or water in a concentration from up to about 0.05-3% by weight of water, with up to about 0.1-1.5% by weight of water being preferred with up to 15% by weight of the animal's animal's feed.
